# The challenge for data sharing: Market speed

Comparison	2G	3G	4G	5G
Year (market)	1993	2001	2009	2018
Bandwidth	25	25	100	30.000 to 300.000
Main applications	Voice calls, short messages	Voice conferencing, mobile TV, GPS	High speed applications, mobile TV, wearable devices	High resolution video streaming, remote control vehicles, robos and medical procedures

- How many standards should we have to meet the needs of this 8-year lapse?
- What is the lapse for the green deal?

# Shared data based on Standardization: Scenarios at digital markets

## Jungle

No actual standards

Each user/maker create their  
own

Full incompatible formats

Need 'translators'

# Shared data based on Standardization: Scenarios at digital markets

## Jungle

No actual standards

Each user/maker create their own

Full incompatible formats

Need 'translators'

## Competing

Several standards in the market

Not open licensed

Generated by incumbents in the market

Could be not complete technical details

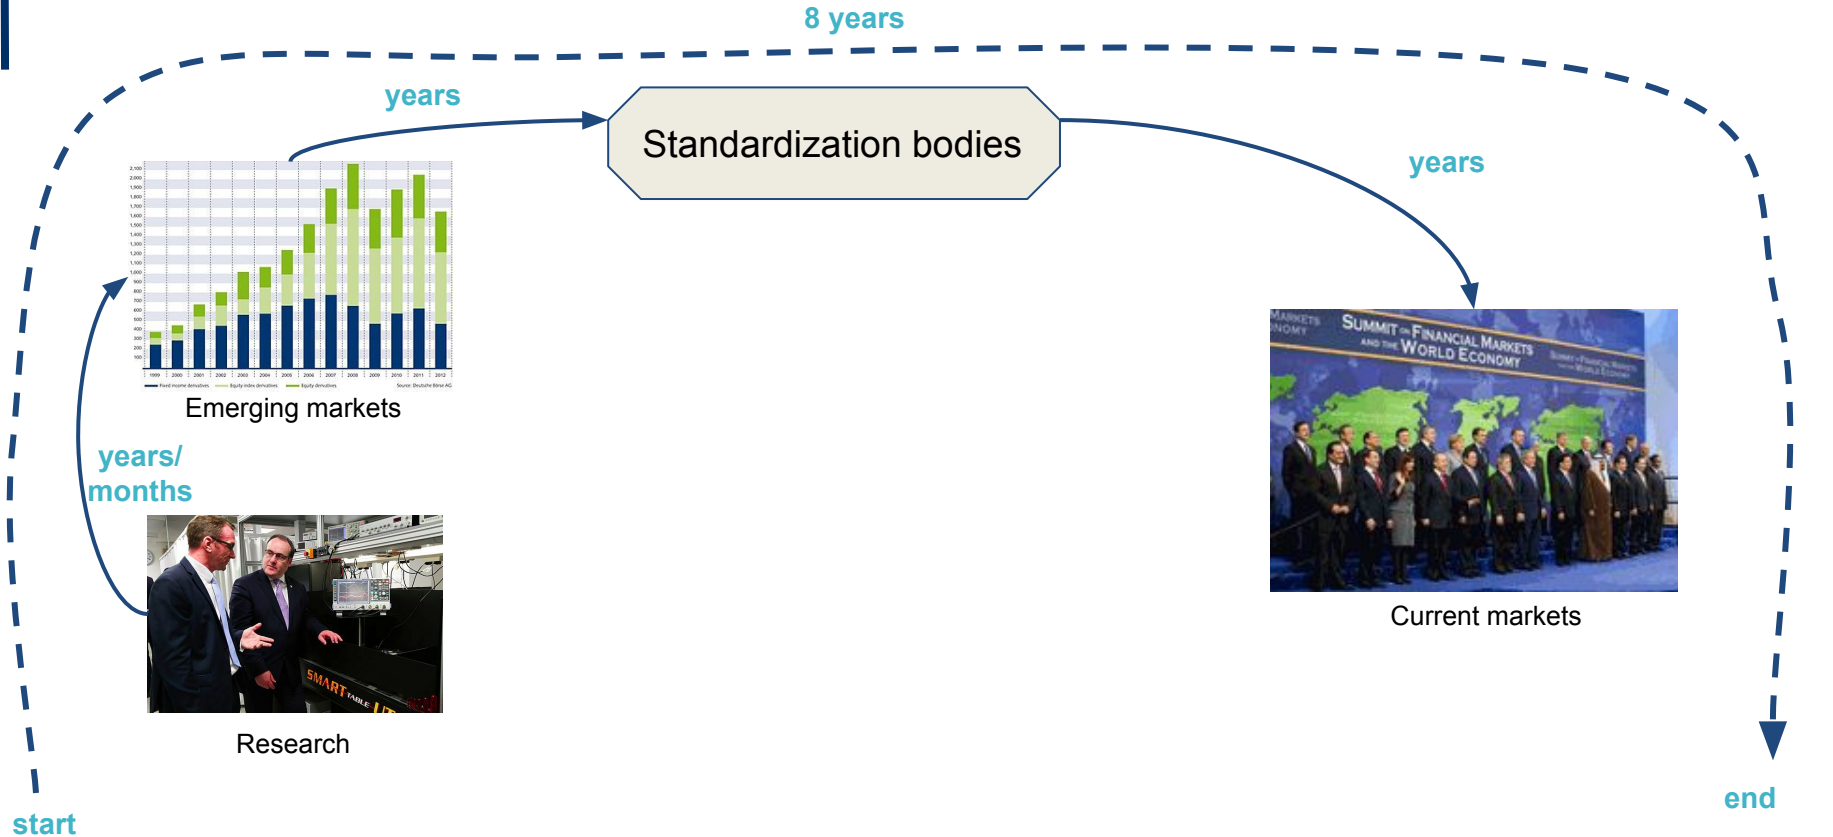

# Shared data based on Standardization: Scenarios at digital markets

Jungle	Competing	Adopted Standard
No actual standards	Several standards in the market	One winning standard
Each user/maker create their own	Not open licensed	It could be the result of a winning one in the competing scenario
Full incompatible formats	Generated by incumbents in the market	Occasionally released as open from incumbent to cope market
Need 'translators'	Could be not complete technical details	

# Shared data based on Standardization: Scenarios at digital markets

Jungle	Competing	Adopted Standard	Public regulation
No actual standards Each user/maker create their own Full incompatible formats Need 'translators'	Several standards in the market Not open licensed Generated by incumbents in the market Could be not complete technical details	One winning standard It could be the result of a winning one in the competing scenario Occasionally released as open from incumbent to cope market	Mandatory Do not provide details Different administrations different regulations

# Standardization in a digital market

# Generic architecture of a data exchange facility

# What is the Smart Data Models Program

- All non-profit organizations
- Smart Data Models is a collaborative program to **provide data models**
  - a. Free and open-licensed data models (0€ cost)
  - b. Multisector
  - c. Based on actual use cases and adopted open standards
  - d. At market speed
  - e. Customizable to local needs
  - f. Compatible with linked data

# What does Smart Data Models Program provide?

- Written specifications in 6 languages (EN, FR, DE, ES, JA, IT)
- Exports in json, jsonld, csv, DTDL, yaml, geojsonfeatures
- Technical validation schema (json format) Single-source-of-truth allow full update in minutes

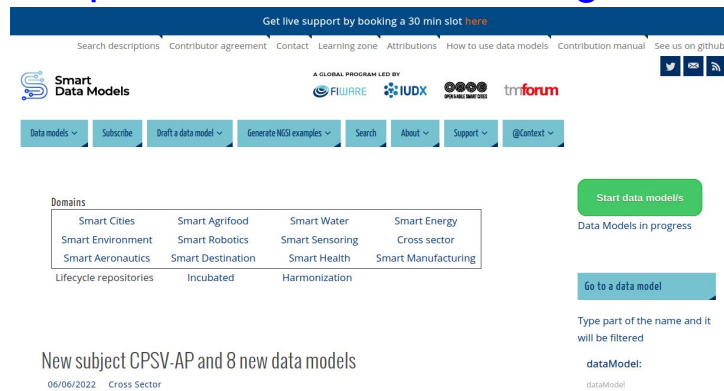

- Main site: <https://smartdatamodels.org>
- Repository: <https://github.com/smart-data-models>

- 807 data models
- 75 organizations contributing
- More than 18.000 attributes documented
- MoU to join the Board

# Services and support to users

- Find a data model by name
  - Find a data model by the subject
  - Search an attribute name
  - Search an attribute data type
  - Search an attribute anything of its definition
  - Generate an example in json key values format
  - Generate an example in jsonld normalized values format
  - Generate a specific context merging several data model
  - Generate a specific context mapping external vocabularies
  - Subscribe to update
  - Raise an issue
- 
- **Book a support session**
  - **Draft a data model from csv payload**
  - **Draft a data model from json/ld payload**

<https://smartdatamodels.org>

The screenshot shows the homepage of the Smart Data Models website. At the top, there is a navigation bar with links for 'Search descriptions', 'Contributor agreement', 'Contact', 'Learning zone', 'Attributions', 'How to use data models', 'Contribution manual', and 'See us on github'. Below this is a header section with the 'Smart Data Models' logo, a 'A GLOBAL PROGRAM LED BY' section featuring logos for FIWARE, IUDX, and others, and a row of buttons: 'Data models', 'Subscribe', 'Draft a data model', 'Generate NGS examples', 'Search', 'About', 'Support', and '@Context'. A 'Domains' table is displayed, listing various smart domains like Smart Cities, Smart Agriculture, Smart Water, Smart Energy, etc. On the right side, there is a green button 'Start data models', a section 'Data Models in progress', and a 'Go to a data model' button. At the bottom, there is a news section titled 'New subject CPSV-AP and 8 new data models' dated 06/06/2022.

Domains			
Smart Cities	Smart Agrifood	Smart Water	Smart Energy
Smart Environment	Smart Robotics	Smart Sensing	Cross sector
Smart Aeronautics	Smart Destination	Smart Health	Smart Manufacturing
Lifecycle repositories	Incubated	Harmonization	

New subject CPSV-AP and 8 new data models  
06/06/2022 Cross Sector
