

NIVA - state of play and results

NIVA WP2 Lead, 23rd of June 2022

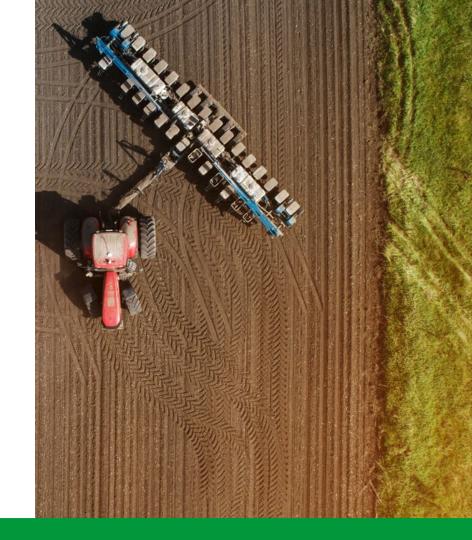

This project has received funding from the european union's horizon 2020 research and innovation programme under grant agreement no. 842009

Outline presentation

- What is NIVA and what were the ambitions at the start (June 2019)
- Reaching the objectives
- Glimpse at a selection of the NIVA Use Cases

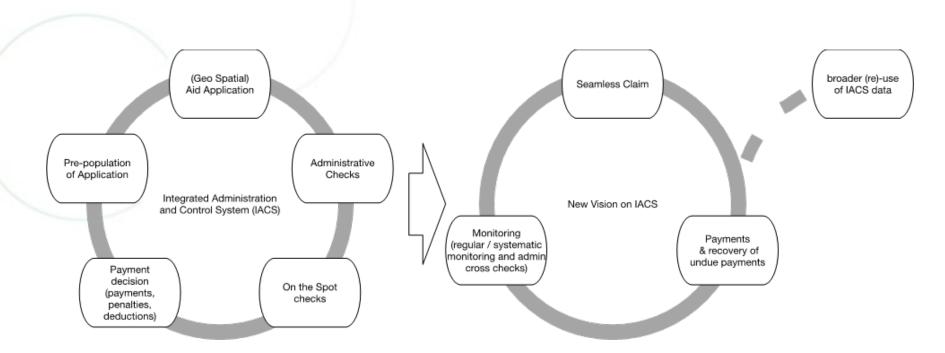

H2020 project NIVA (New Vision in Action)

- H2020 Innovation Action
- Proposal in response to <u>call</u>: Digital solutions and e-tools to modernise the CAP
- Consortium
 - lead = WUR
 - 9 paying agencies (NL-DK-SP-IT-FR-GR-EE-LT-IR)
 - technical partners, total 27 partners

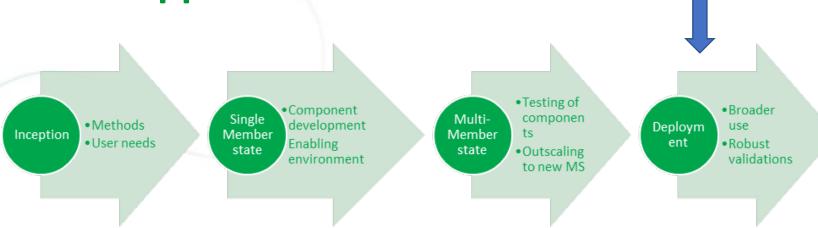

Integrated Administration and Control System (IACS) Evolution

Progress on NIVA main challenges

Challenge	M0-baseline situation	M18 NIVA achievements
Absorbing innovations to simplify the governance	 Innovations implemented separately in the 41 different IACS systems in Europe only 2 to 3 open source solutions covering small parts of IACS systems 	 More than 30 components have been developed and are being tested in cross-boundary collaboration Working modes to learn from each other in an active way, and start relying on developments implemented in different PA systems. Methodologies for Multi-Actor development and innovation deployment in IACS specified
Reducing socio-economic and administrative burden to farmers	 Digital innovations offer potential to reduce the burdens to farmers and PA's, Digital innovation being tested in some research projects 	 Different aspects of implementing digital solutions have been aligned through an 'As-is' analysis Wider adoption of research products in innovations and field testing ongoing Pilots being tested specifically focused on lowering administrative burden through technology
Reducing the gap between IACS data use and potential broader uses	 IACS derived data are shared in some member states on an 'As-is' basis lack of standardization across claim years and common lists of relevant attributes (e.g. parcels, crops, vegetation types) 	 Operational testing of IACS data use in pilots for other purposes; Standardization issues in IACS highlighted and recommendations provided in a stakeholder oriented way

NIVA approach

- Iterative development
- Learning approach
- Time: June 2019 Nov 2022

Focus development areas in June 2022-Nov 2022

- Continue the focus on cross Member State collaboration and co-design as done in the first 18 months, while grasping the opportunity to involve outside-NIVA PAs and other partners;
- Focus on active implementation of the NIVA innovations and components in PA systems. Within PA's there are many different departments and those departments deciding on adoption of innovations might not be involved in NIVA. Hence an PA Adoption group was started over the past months of NIVA to facilitate uptake of innovations;
- Continue to further engage a wide range of stakeholders through the Stakeholder Forums, building on a good virtual presence with webinars and whenever possible engaging 'in-person' for dedicated topics. A stakeholder analysis will be used to further broaden the involved stakeholder groups and achieve a better coverage;
- **Develop more accessible knowledge products (through policy and technical briefs)**, alongside a unique open source approach, providing the stakeholder network with the required insights and sense-making;
- Solidify the network in a future oriented exploitation plan

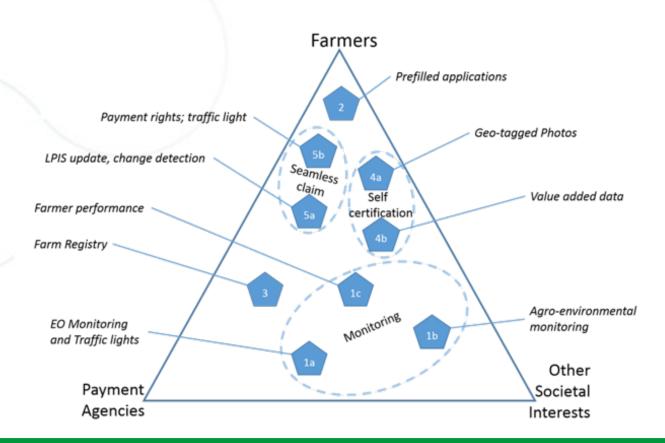

Glimpse at some Use Cases

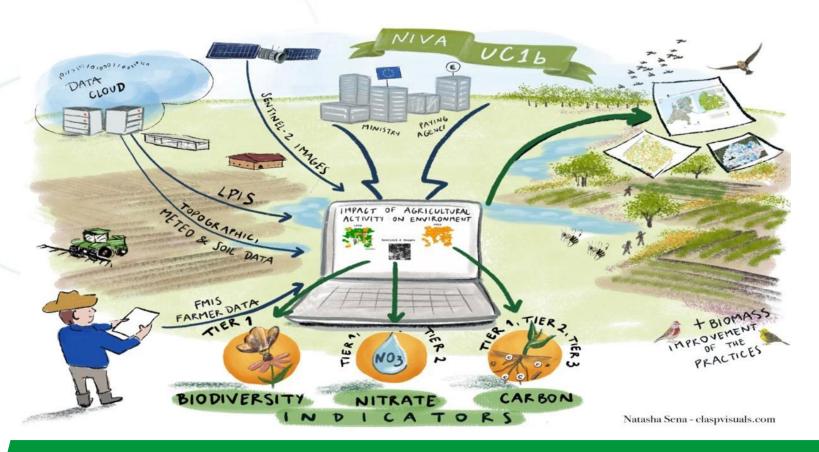

This project has received funding from the european union's horizon 2020 research and innovation programme under grant agreement no. 842009

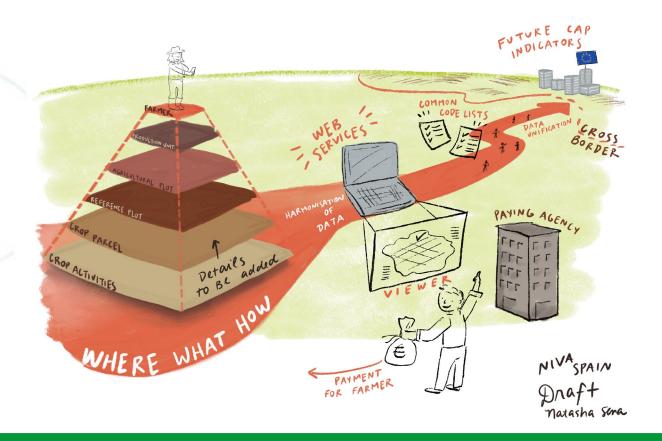

NIVA – Architecture and Components

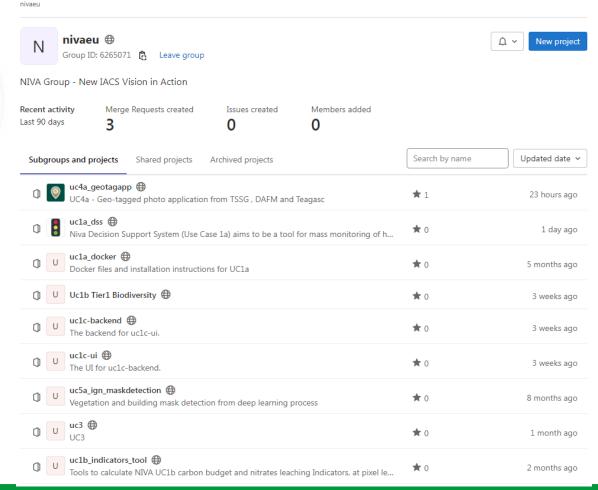

This project has received funding from the european union's horizon 2020 research and innovation programme under grant agreement no. 842009

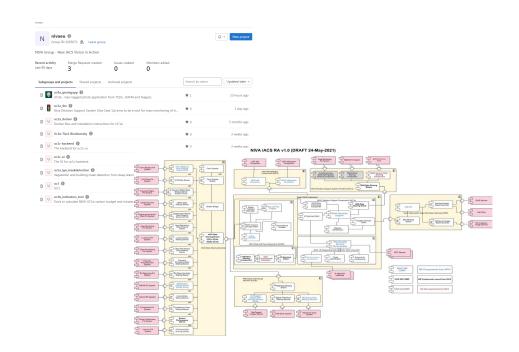

NIVA architecture V2.0

 Current List of Components at Gitlab/nivaeu

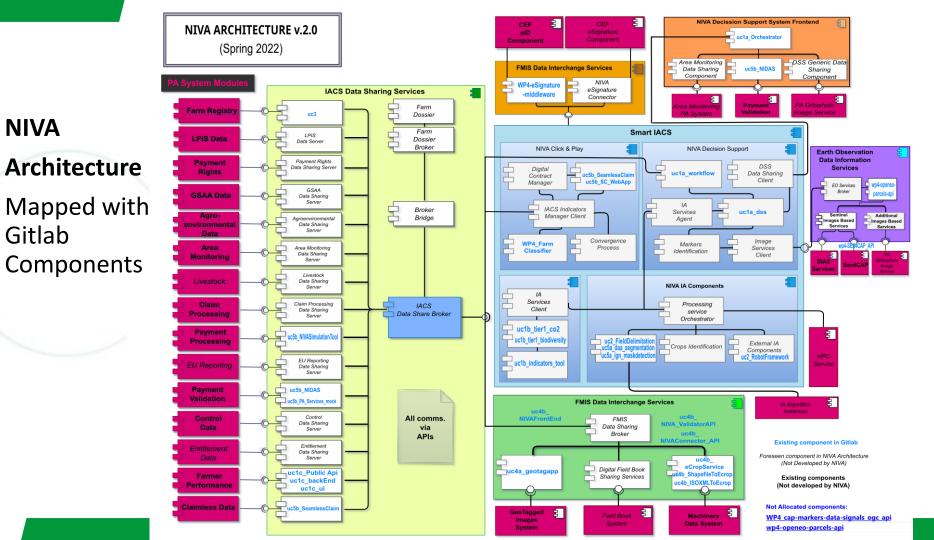

NIVA architecture V2.0

- Description of the components in NIVA D2.3 (M24):
- Status of development
- II. Inputs
- III. Outputs
- IV. Progress
- NIVA Architecture general analysis in NIVA D2.3 (M2.4) section 3.3

NIVA Architecture Mapped with Gitlab

NIVA - communication

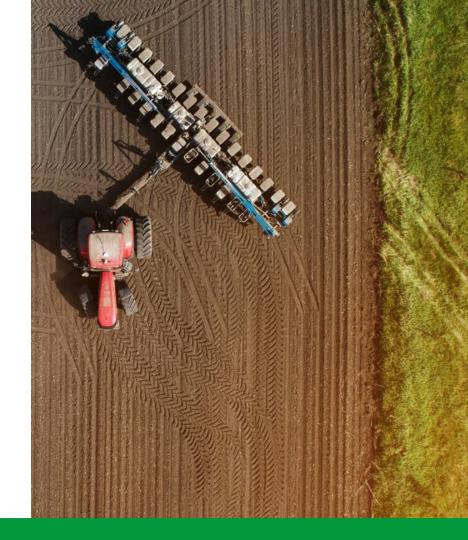

This project has received funding from the european union's horizon 2020 research and innovation programme under grant agreement no. 842009
