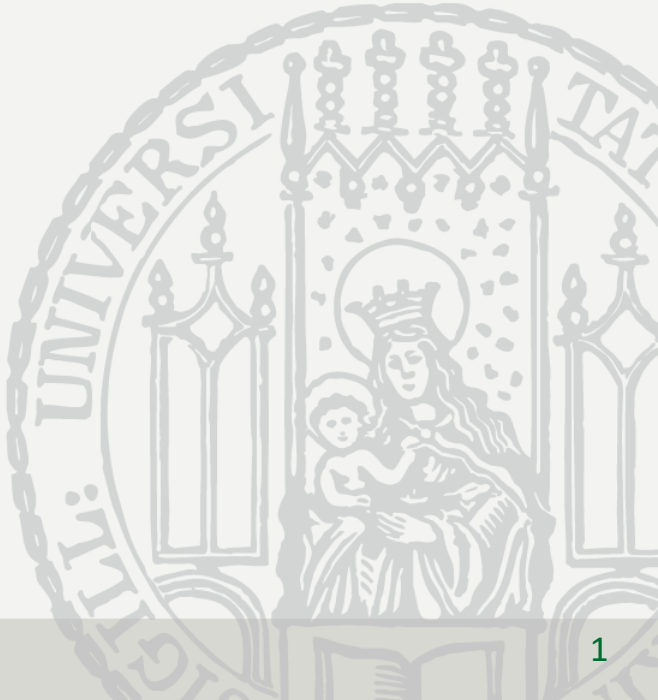
Secure Group Communication in Constrained Networks – A Gap Analysis

IEEE Global IoT Summit 2017
Geneva, Switzerland



Motivation

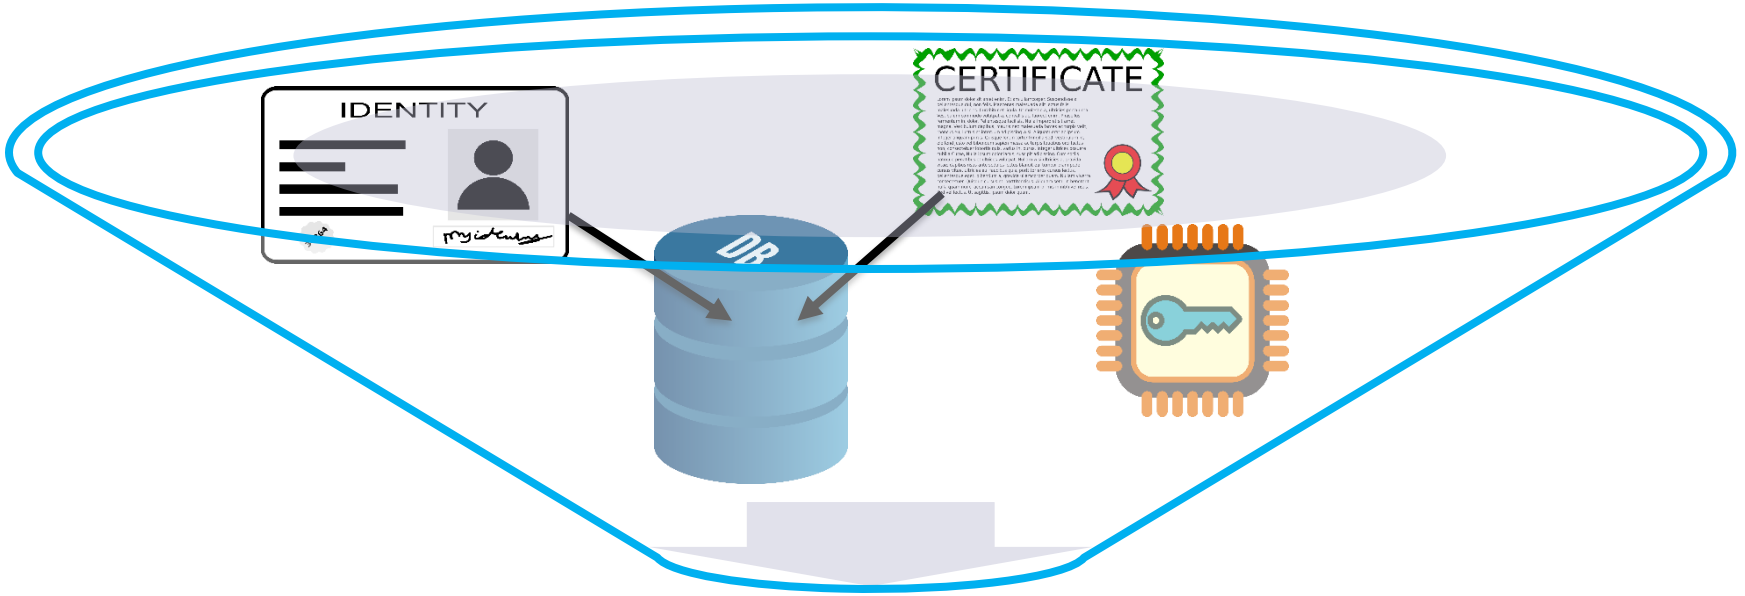
Since ~2013:

Several and long discussions about

Secure Group Communication

in IETF working groups (DICE, ACE, …)

The Goal

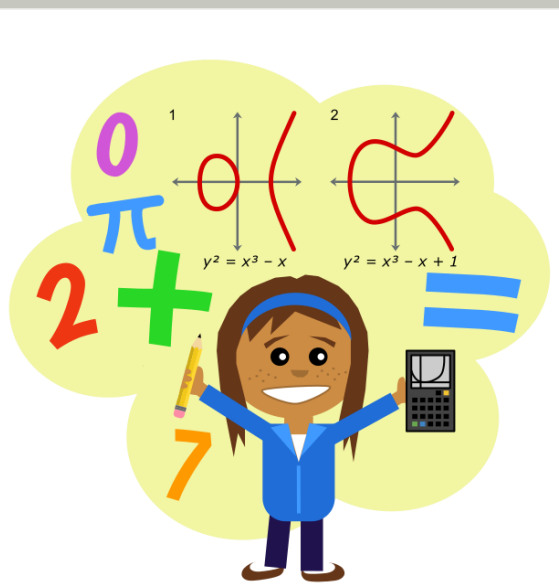


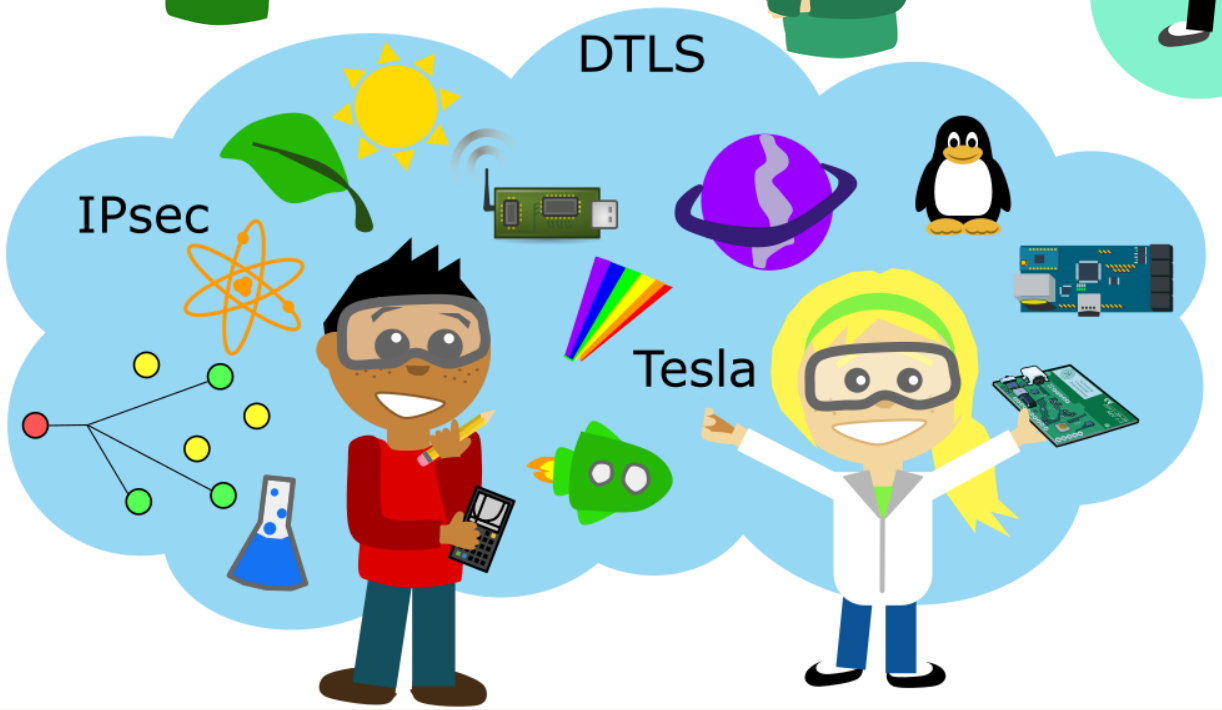
Toolbox for Secure Group Communication in constrained environments (e.g. IoT)

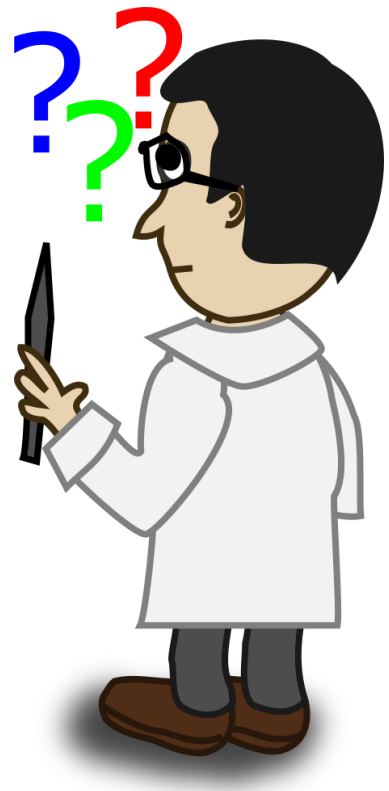
Motivation - Testbed

Devices	 Arduino Uno	 Arduino M0+	 Arduino Due	 ESP 8266	 Raspberry Pi (v1-v3) Banana Pi Beaglebone
Architecture	ATmega328	ARM Cortex-M0+	ARM Cortex-M3	Tensilica L106	ARMv6 – ARMv8
CPU	16 MHz	48 MHz	84 MHz	80-160 MHz	700-1200 MHz
RAM	2 KB	32 KB	96 KB	64 KB	256-1024 MB
Flash	32 KB	256 KB	512 KB	1 MB	
Operating System	RIOT OS	RIOT OS	RIOT OS	Free RTOS	Linux

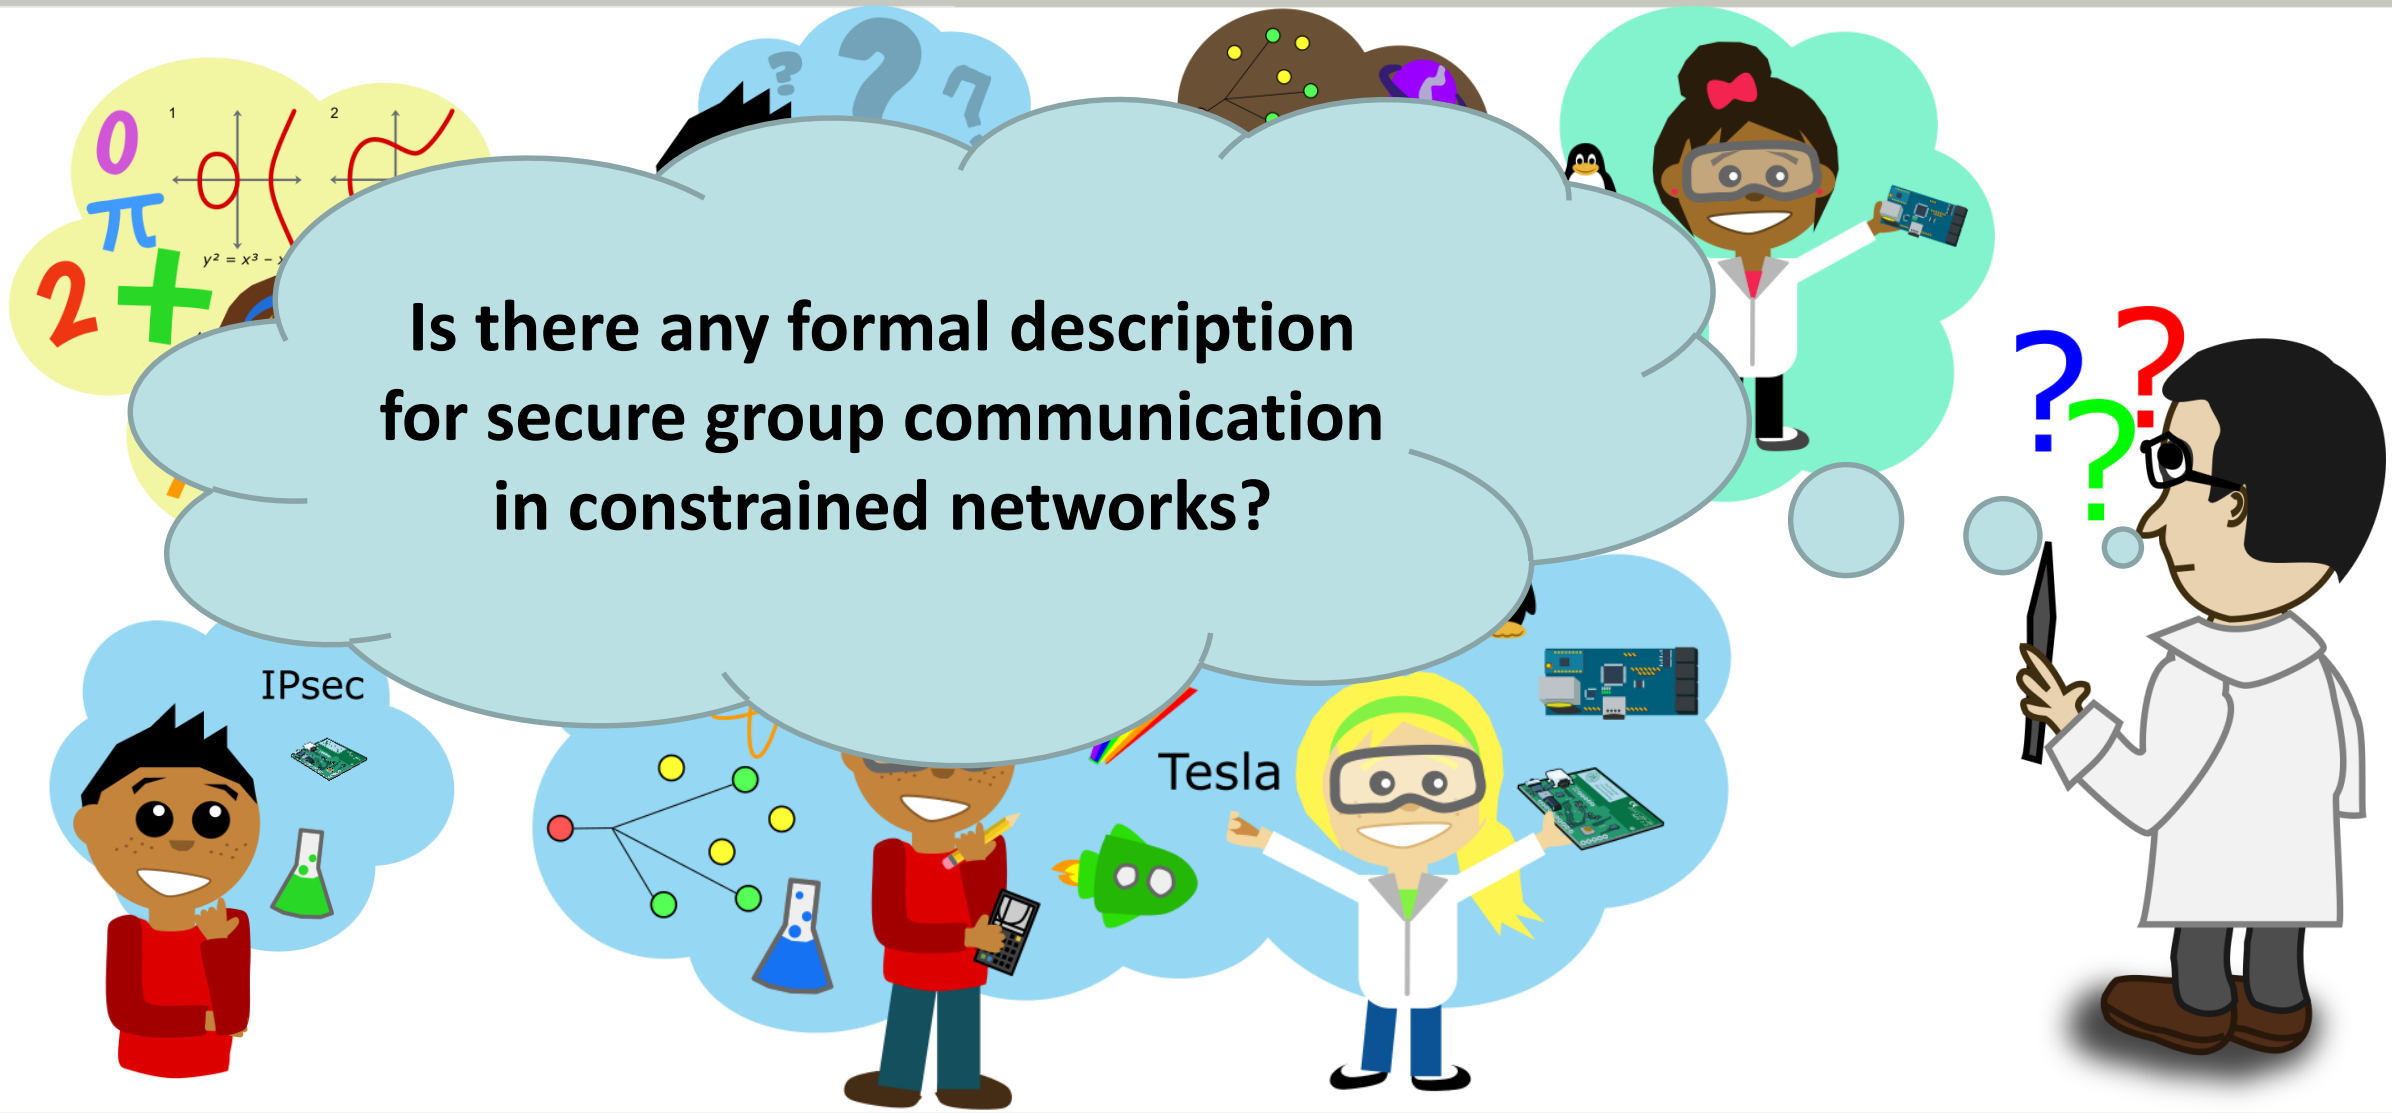
Motivation





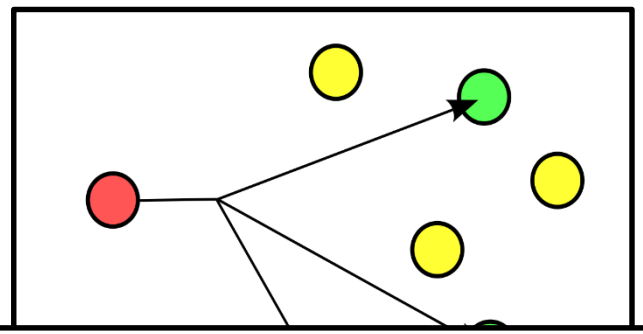


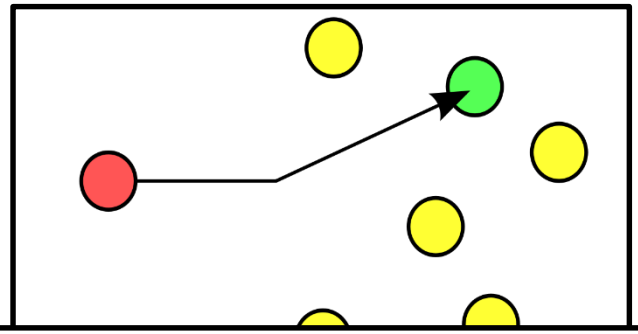
Motivation



Is there any formal description
for secure group communication
in constrained networks?
IPsec
Tesla

What is *Group* Communication?





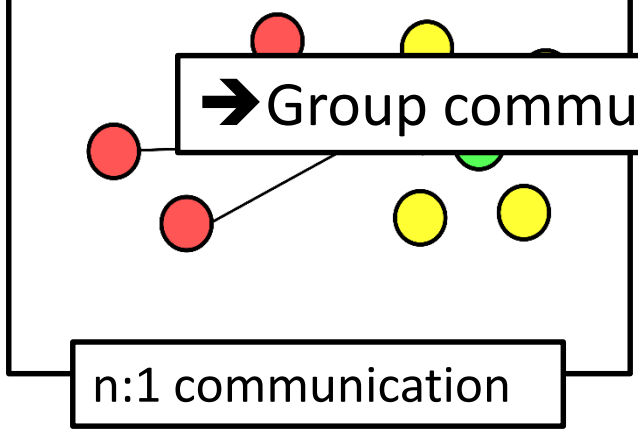
➔Group communication includes most major IoT-related communication models

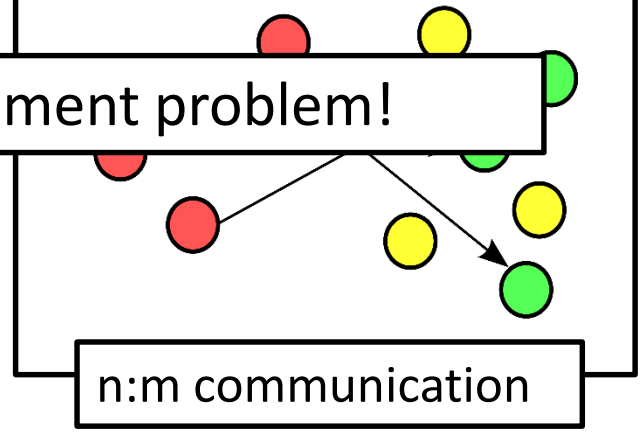
1:n communication

1:1 communication

➔Securing groups can help securing IoT in general

➔Group communication is a management problem!





n:1 communication

n:m communication

Question

What is
"Secure Group Communication"

What is
"Secure Group Management"

What is secure?

Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2.13), **integrity** (2.36) and **availability** (2.10) of information

NOTE In addition, other properties, such as **authenticity** (2.9), **accountability** (2.2), **non-repudiation** (2.49), and **reliability** (2.56) can also be involved."

[ISO/IEC27000, 2.30]

What does that mean for Group Communication?

Definition according [illegible]:

"**information**

preserva[illegible] **egrity** (2.36) and **availability** (2.10) of informat[illegible]

NOTE In [illegible] as **authenticity** (2.9), **accountability** (2.2), **non-repudiati[illegible]** can also be involved."

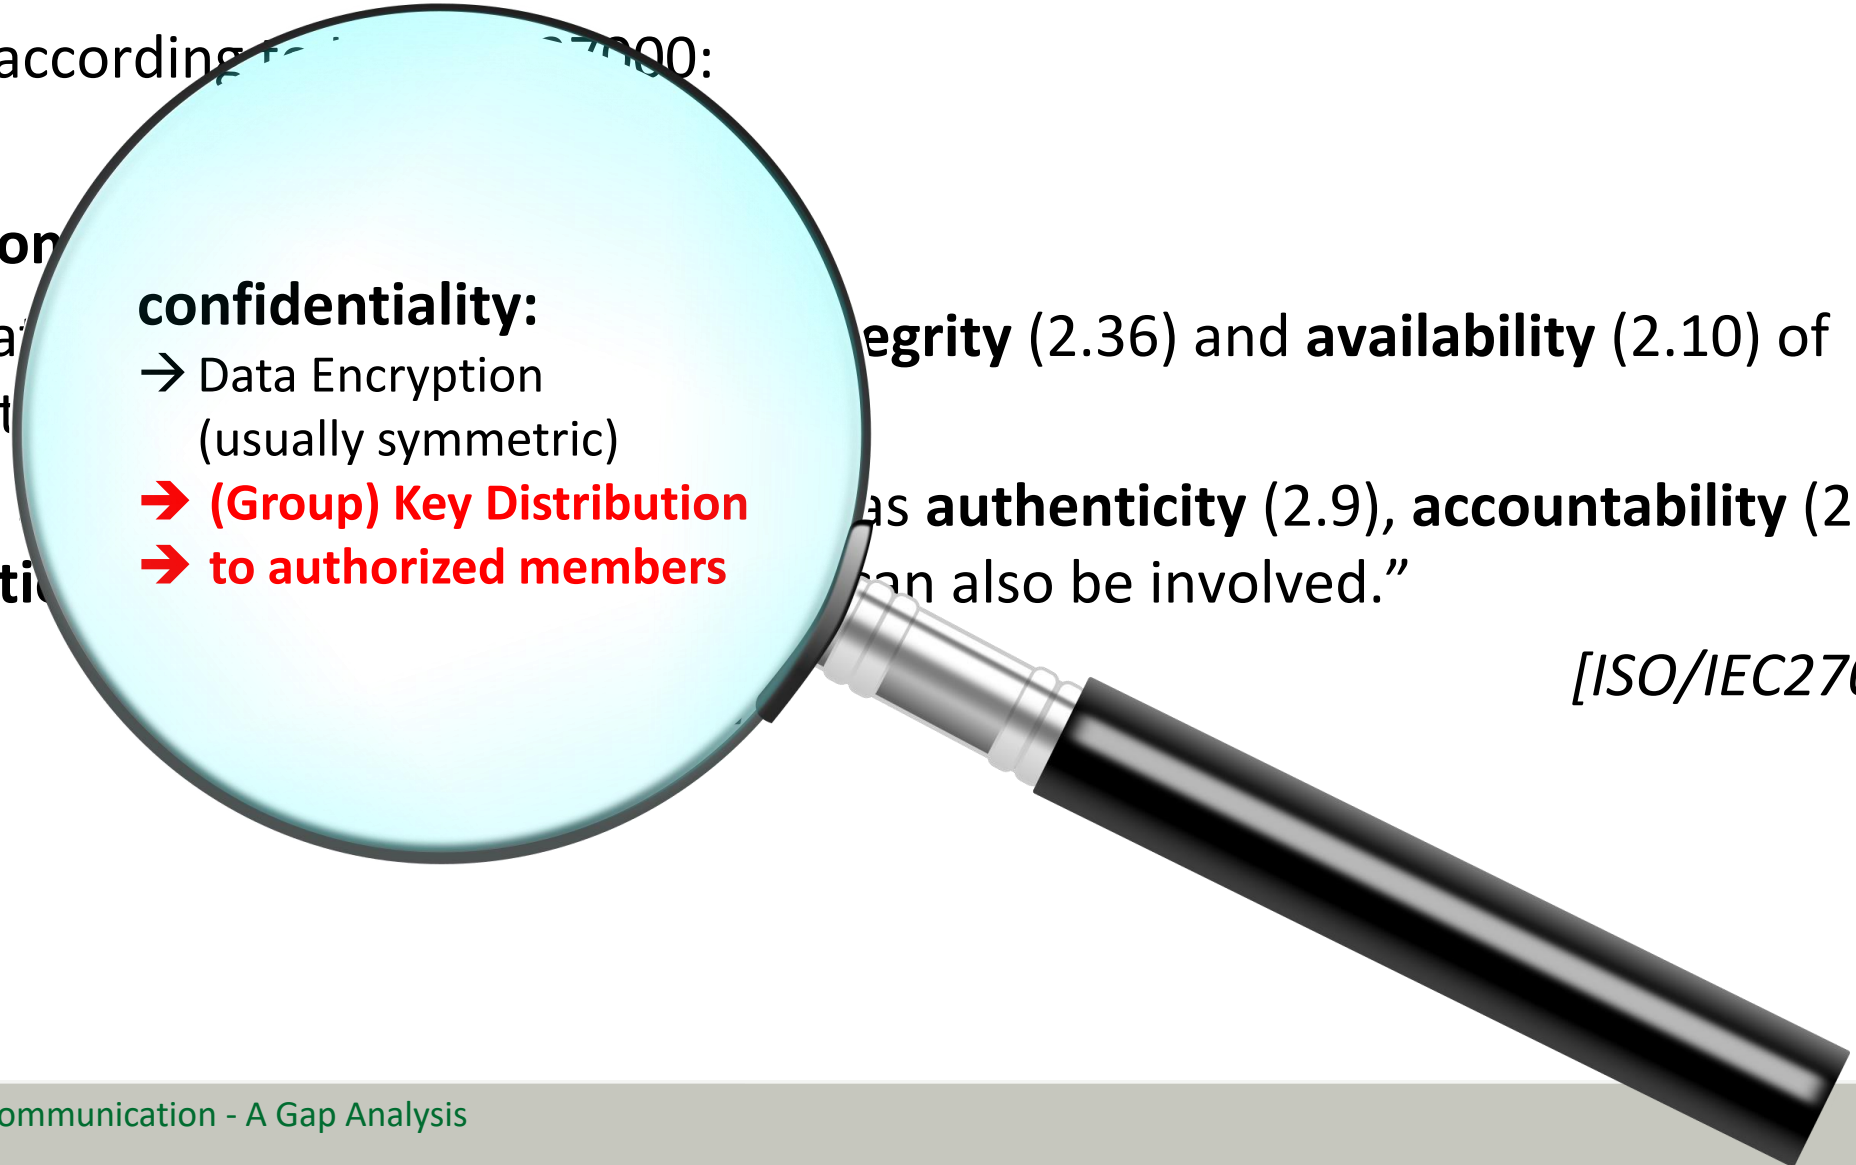
[ISO/IEC27000, 2.30]

confidentiality:

→ Data Encryption (usually symmetric)

➔ **(Group) Key Distribution**

➔ **to authorized members**



What does that mean for Group Communication?

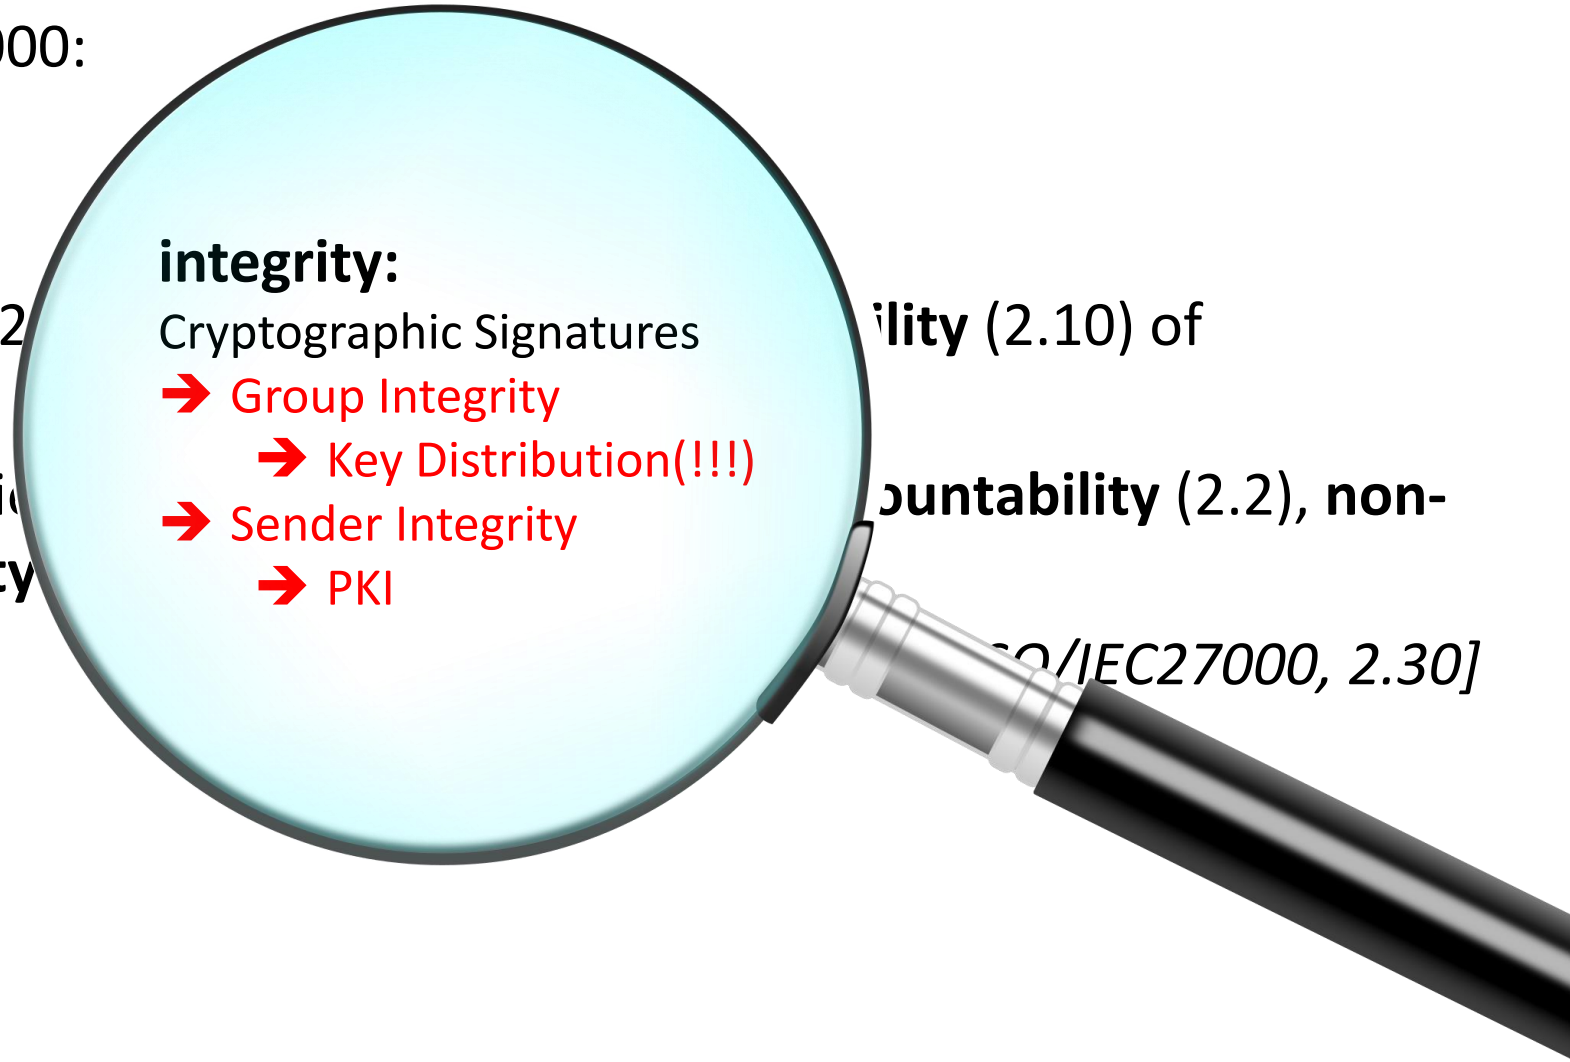
Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2 **ility** (2.10) of information

NOTE In addition, other properti **ountability** (2.2), **non-repudiation** (2.49), and **reliability**

O/IEC27000, 2.30]



What does that mean for Group Communication?

Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2.13), **integrity** (2.3(information

NOTE In addition, other properties, such as **authent** **repudiation** (2.49), and **reliability** (2.56) can also be

availability:

➔Member can join group

➔Group Management (GM)

→ AAI

→ Secure GM

What does that mean for Group Communication?

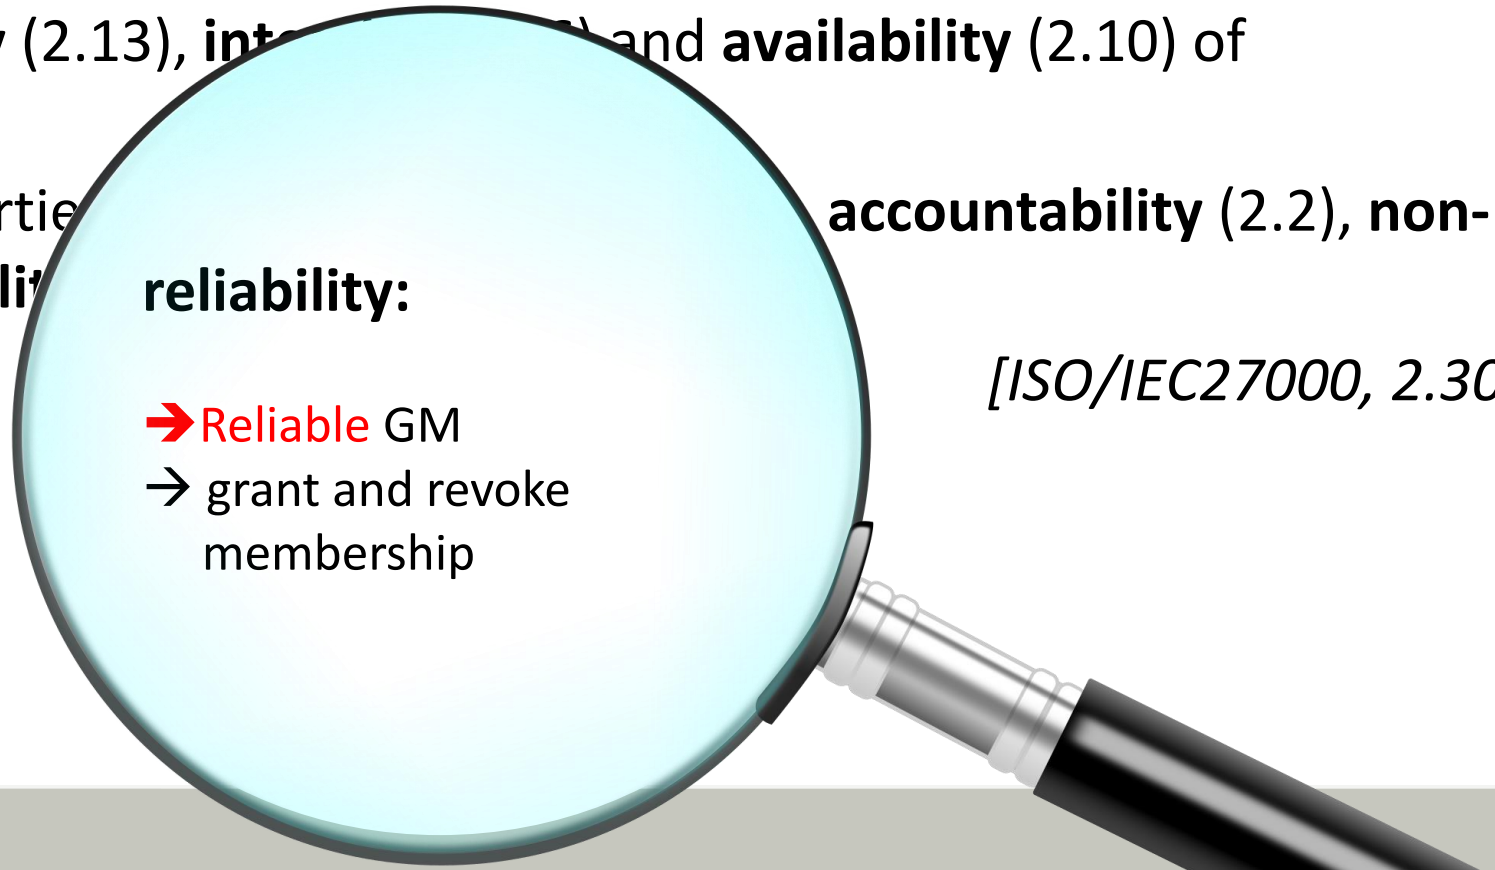
Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2.13), **int** and **availability** (2.10) of information

NOTE In addition, other propertie **accountability** (2.2), **non-repudiation** (2.49), and **reliabili**

[ISO/IEC27000, 2.30]



What does that mean for Group Communication?

Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2.13), **integrity** (2.36) and **availabi**
information

NOTE In addition, other properties, such as **authenticity** (2.9
repudiation (2.49), and **reliability** (2.56) can also be involve

accountability:

➔Right Management
→ join, leave,
→ create,destroy
→ send messages

What does that mean for Group Communication?

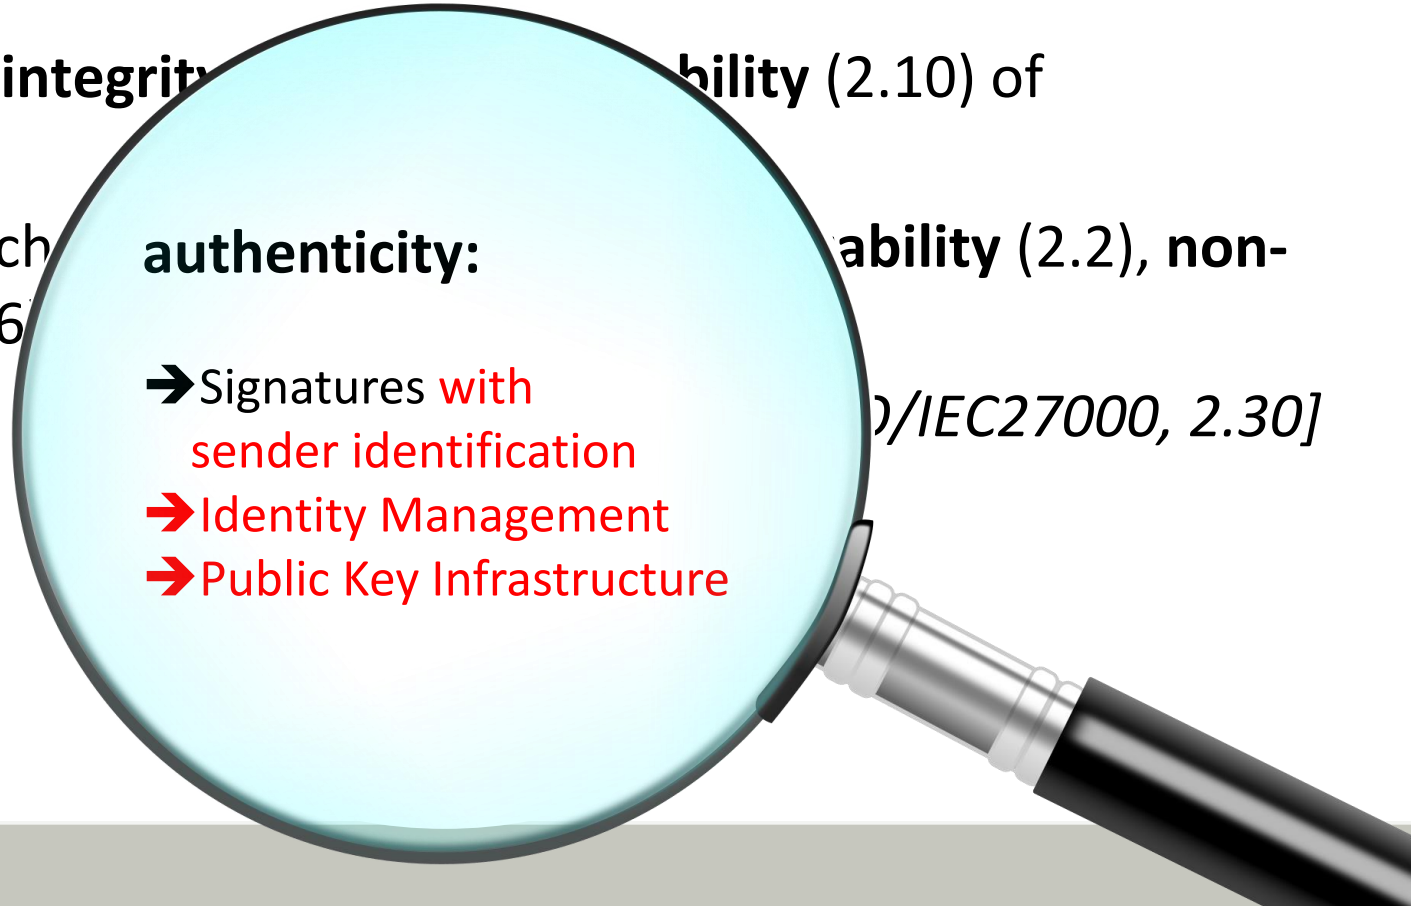
Definition according to ISO/IEC 27000:

"**information security**

preservation of **confidentiality** (2.13), **integrity** (2.21), **availability** (2.10) of information

NOTE In addition, other properties, such as **authenticity** (2.3), **accountability** (2.2), **non-repudiation** (2.49), and **reliability** (2.56) can also be involved.

[ISO/IEC27000, 2.30]



What does that mean for Group Communication?

Definition according to ISO/IEC 27000:

"**information security**

preservation of confidentiality (2.13), **integrity** (2.36) and **availability** (2.10) of information

NOTE ... properties, such as **authenticity** (2.9), **accountability** (2.2), **non-repudiation** (2.56) can also be involved."

[ISO/IEC27000, 2.30]

non-repudiation:

➔ Sender Authentication
AND Identity
AND Public Key Management
➔ Message ID (Seq. Nr)
➔ Acknowledgement (?)

Gap Analysis

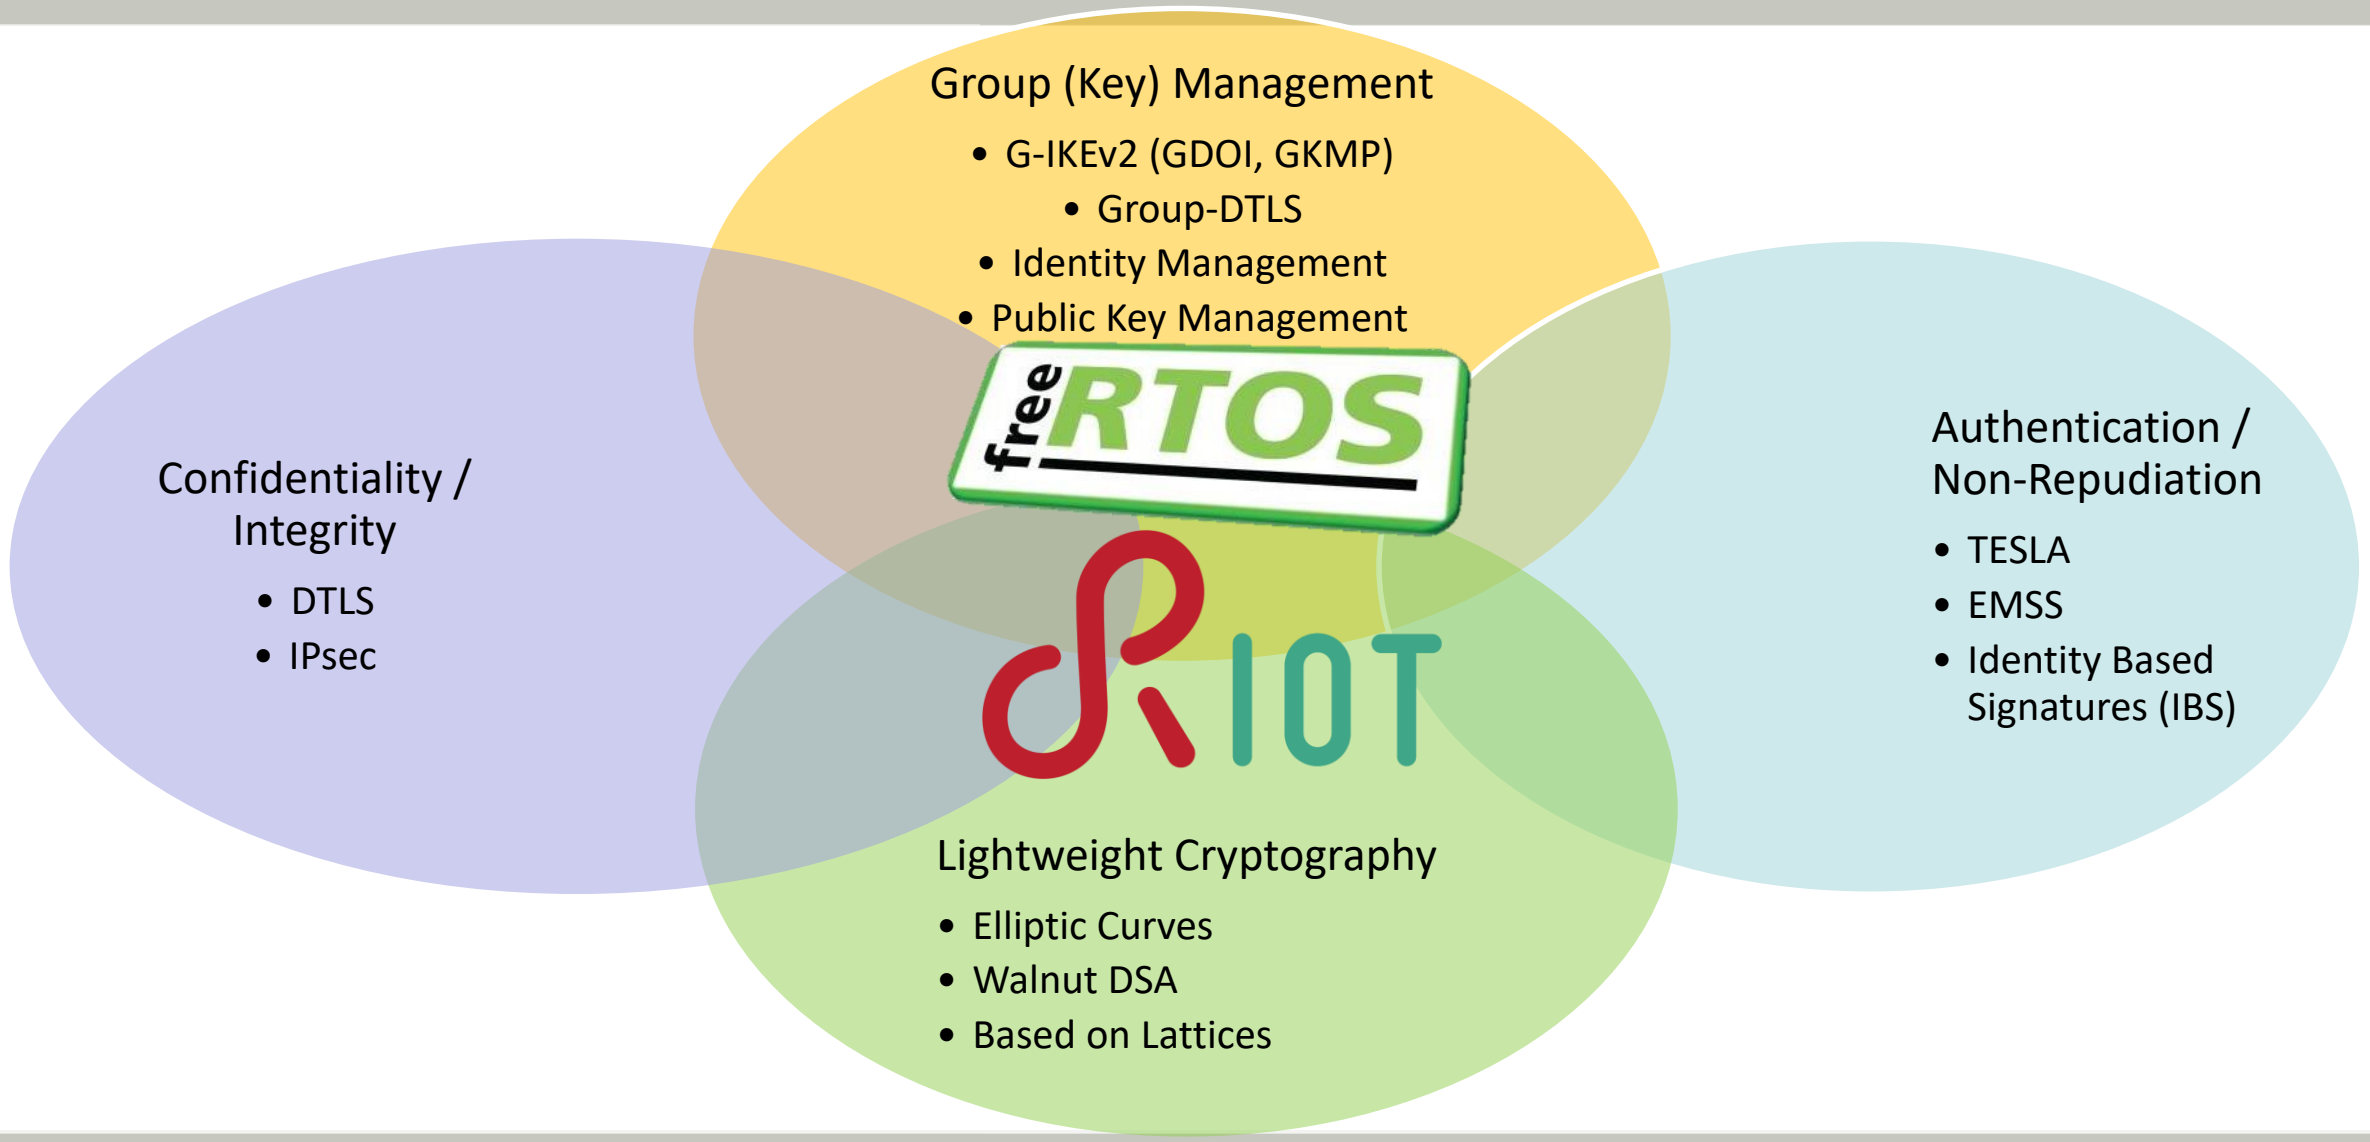
legend: ✔ addressed by design (✔) partially addressed ✘ not addressed by design

[a] unauthenticated group management [b] no message source authentication/integrity. [c] no group management [d] delayed signature verification
[e] no anti-replay mechanism

Current & Further Investigations



Conclusion / Take Aways

- Secure Group Communication is a management problem
- We defined properties for Secure Group Management
- Analysis shows no existing „IoT-aware“ solution
- Research requires a solid testbed:
  → MNM-Team setup: www.mnm-team.org/projects/embedded

The End
