IoT

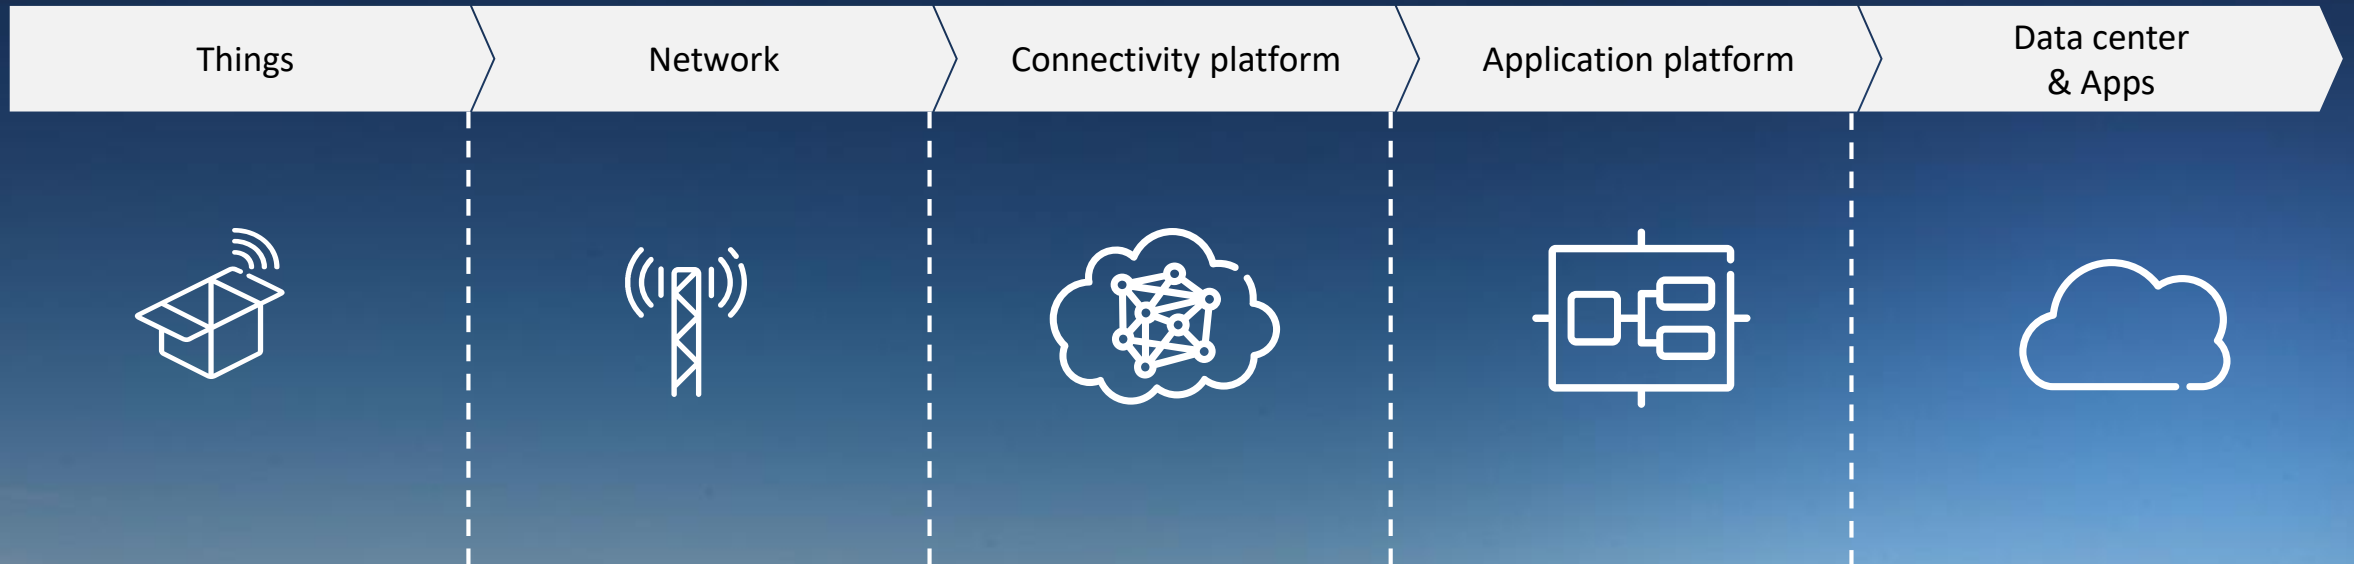

Cross-Industry

Business Focus

Multi-Purpose

Building the technology platform

Things with e.g. SW and sensors that measure the surrounding

Either wireless or wired connectivity that connects 'Things' to platforms and data centers

Connected device platform managing connectivity for 'Things'

Application enablement platform for Apps utilizing 'Thing' data

Applications developed on top of the application platform

Digitization of the assets and things
Embedded Software

Near field
Long Range Low Po
2/3/4/5G
