Programme

Smart Transportation

IoT and Emerging Technologies in Smart Transportation

Panelists

- **Yann Bocchi**, Professor and Head of the Software Engineering Unit, Committee Member
 - University of Applied Sciences and Arts Western Switzerland (HES-SO) Valais / Swiss Mobility Lab, Switzerland

- **Philippe Cina**, International Markets, Head of Business Development
 - PostBus Switzerland

- **Francois Fischer**, Senior Manager Innovation and Development
 - ERTICO, Belgium

- **Ovidiu Vermesan**, Chief Scientist
 - SINTEF, Norway

Questions

- Present key IoT technologies that are integrated into the autonomous devices?
- How you envision the integration and convergence of IoT platforms and autonomous vehicle platforms?
- Security and safety in the era of IoT and autonomous vehicles integration.
- How IoT and AI are transforming transportation with intelligent mobility?
- How you envision smart transportation in 2030?

Questions

- How can OEMs match **consumer needs** with autonomous driving solutions?
- How will the **market** for autonomous vehicles develop and how you envision the **product roadmaps** for the next 10 years?
- How will government **legislation** keep pace with new technologies while also addressing questions of **liability**?
- Which **business models** will emerge in the new industry?
- The **partner and competitor ecosystems** in autonomous driving?
