- Introduction of NIOT

Background

-Research Data Identification

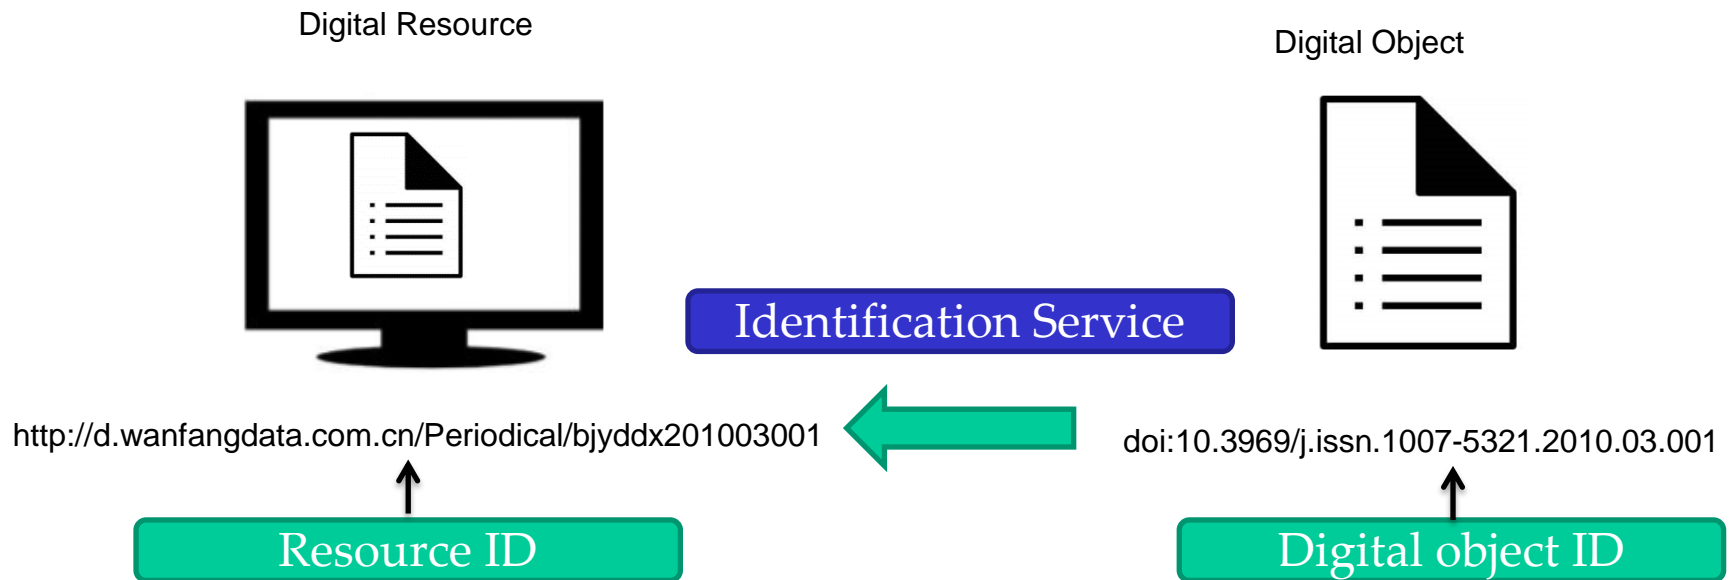

- DOI is widely used for the identification of the digital objects, especially the digital editions. DOI is a typical application of the Handle system.

Background

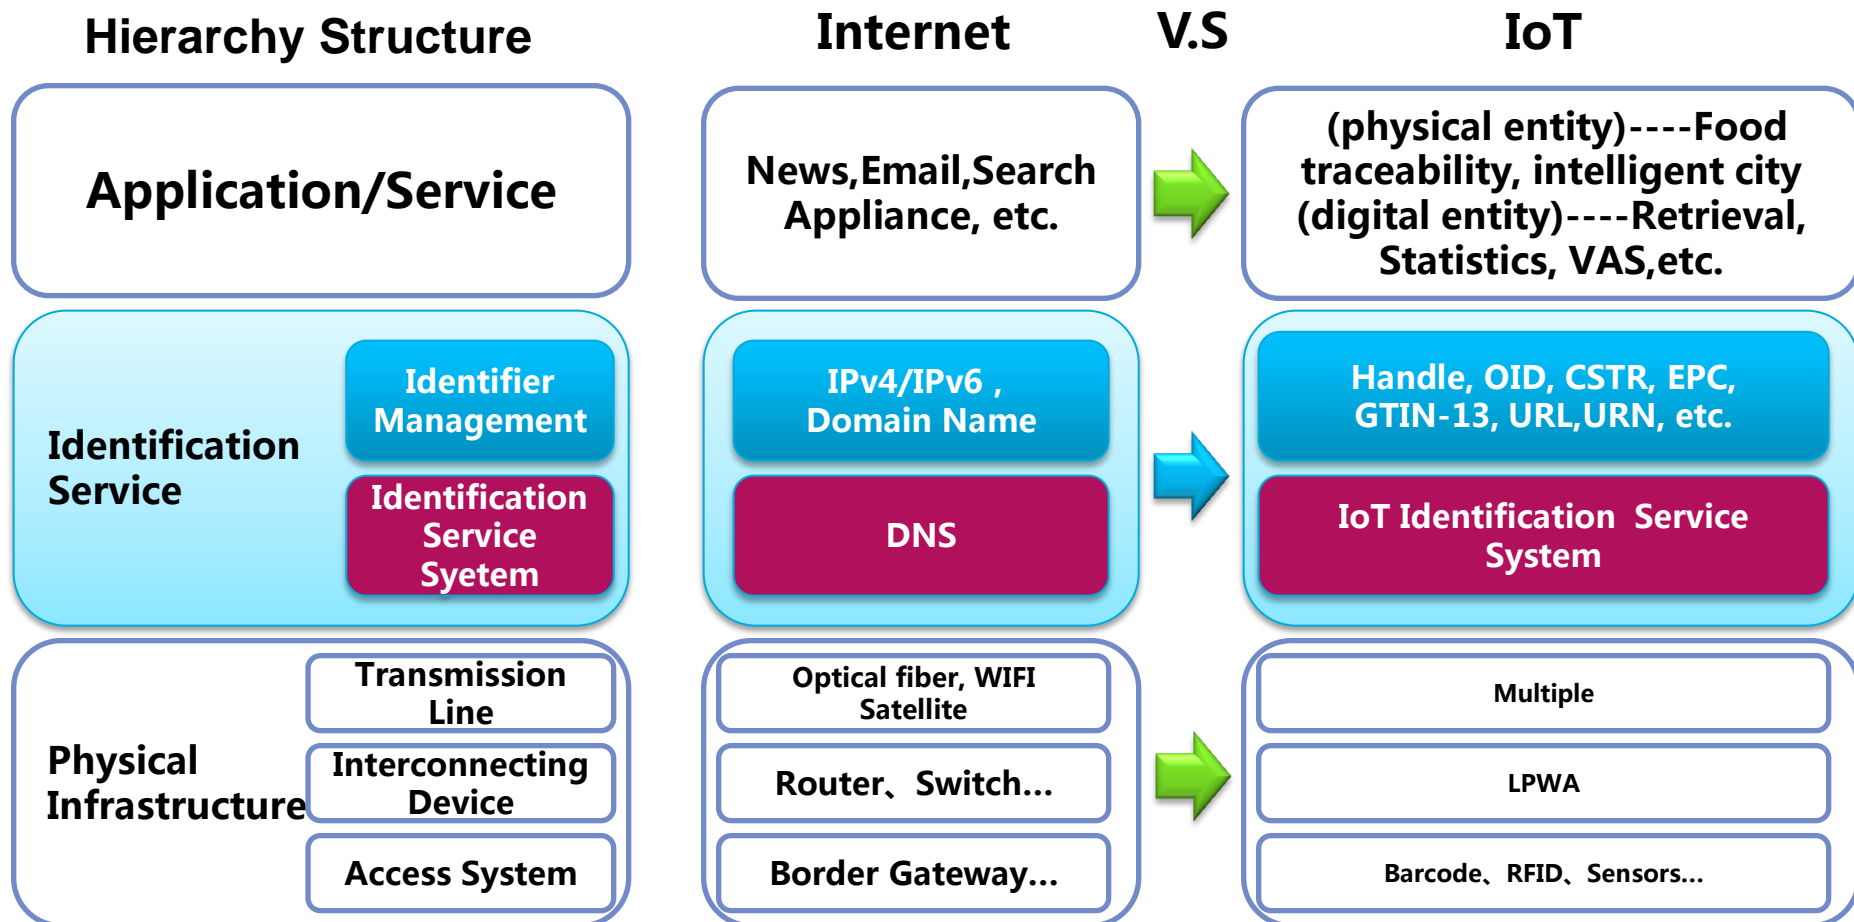

-Research Data Identification

- For DOI, the digital object is the paper whose id is the DOI number, the resource is the webpage whose id is the URL. Thus, the identification service is realized as getting the resource using the DOI number.

Background -Identification Service

- The identification service is NOT a new notion
- In the Internet, the identification service is the DNS

Challenge-interconnection inside the digital object identification

- For some reasons, some other identification systems appeared to identify the digital objects
- There are several ID systems for the digital resource management in China, such as DOI system, CNOID system, and CSTR system (Chinese Science and Technology Resources).
- *The interconnection between these identification systems bring a big challenge.*

Challenge-interconnection with other IoT applications

- There have been a number of heterogeneous identifiers contribute to various domain in the IoT area, besides the research data application, each identification system has its own service framework.
- *How to range between the heterogeneous identification systems when the various application need to change the information*

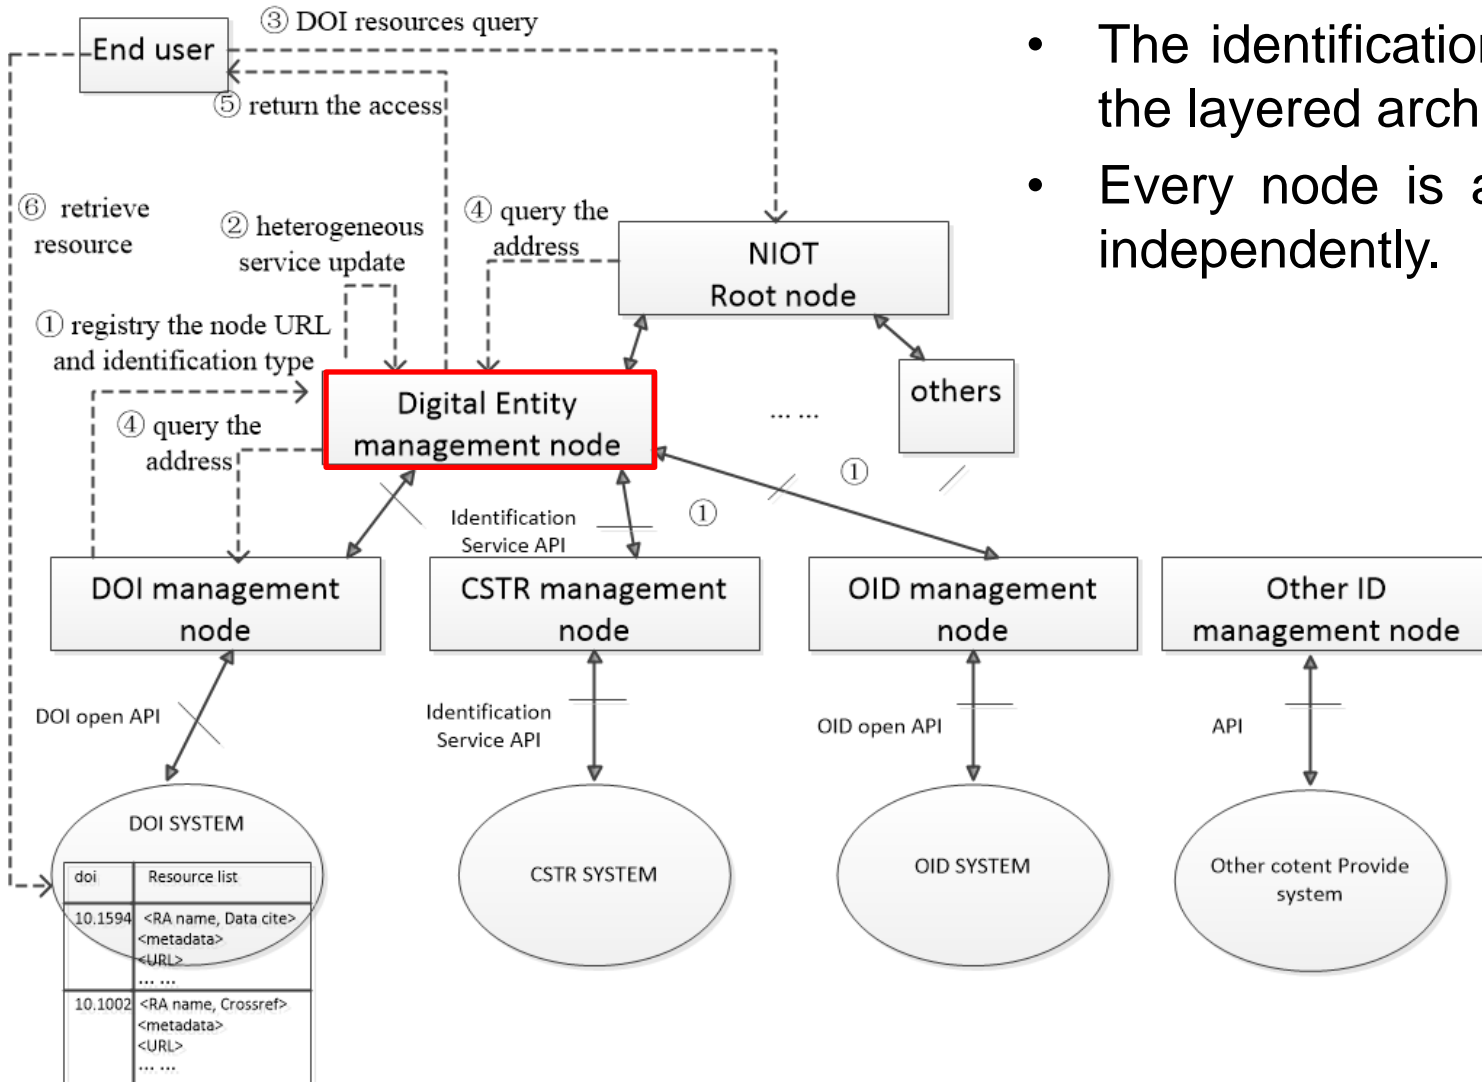

Solutions-NIOT: IoT ID management and public service platform

- NIOT is a unique ID platform in China.
- The root node of the NIOT can interconnect with other international ID systems through a p2p network.

Solutions-NIOT: Architecture for digital resource application

- The identification service adopt the layered architecture.
- Every node is able to operate independently.

Solutions-Core Service

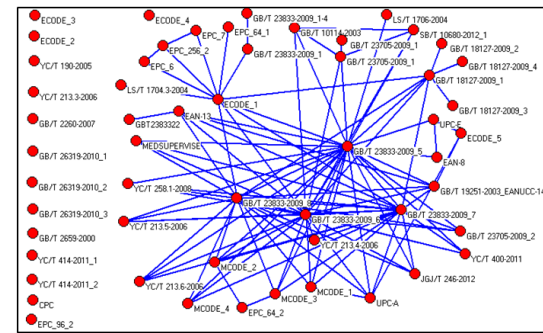

The key points of the **IoT identification service**:

- **Heterogeneous Identification Service**

Propose an identifier conflict detecting model and the criterion algorithm method to solve the collision problem of the identification and to provide compatible service.

- **Distributed Name Services**

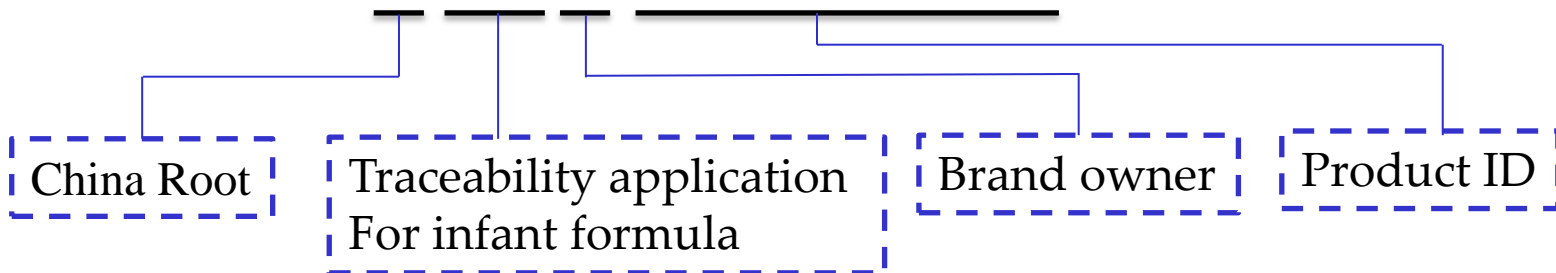

Develop a hierarchy architecture, including the root node and child nodes, each child node is docking to its upper hierarchy, providing identifier mapping, storing and access.

Solutions-Identification Data

Handle identifier in the application of the infant formula traceability

86.1000.11./69016092958216

CHINA INTERNET OF THINGS NAME SERVICE PLATFORM

Applications

There are a number of various applications based on the identification service.

- Smart Agriculture
- Food Traceability
- Supply Chain Management
- Industrial Internet
-

Applications-Smart Agriculture

- Based on the IoT identification service to realize the management of and analysis of the various data information to support the smart agriculture.

Applications-Industrial Internet

- In the Internet of Industry, the IoT identification system develop the identifier for in-progress item in every step during production. The manufactures and the end-user are able to capture the information of the product in the whole supply chain which improve the management of the production

<industry-product ID, process_data ID>

<industry-product ID, supply-chain_data ID>

Introduction of NIOT

- The China Internet of Things Names Service Platform (NIOT) is the national identification service platform which is approved by the NDRC (National Development and Reform Commission) in 2012 to fully support the IoT industry development.

GS1 China

Electronic Technology Information**

**China Academy of
Information Communication Technology**

Introduction of NIOT

- Construction Situation

Node Construction

5 root nodes already constructed. 3 identification system child nodes and dozens of the application platform .

Service Data

The number of registered identifier is over **1.0 billion** , the sum of query is over **1.2 billion**.

THANK YOU

For Example

- **DOI resolution**

The doi resources can be easily obtained either by tapping the DOI on the doi webpage or through the search engine.

Resolve a DOI Name

doi:

Go

||

For Example

- HdI resolution :

The doi resources can be obtained by hdl, such as 86.1000.486.3986/.....

The cstr resources can be obtained by CSTR, such as cstr.xxx.xxx.xxx

Handle.Net®

Handle: 86.1000.486.3969/j.issn.1007-5321.2010.03.001
