The IoF2020 Story

IoF2020 & SDGs

IOF2020 IN BRIEF

**70+ PARTNERS
ORGANISATIONS**

**16
COUNTRIES**

4 YEARS
Start = January
2017

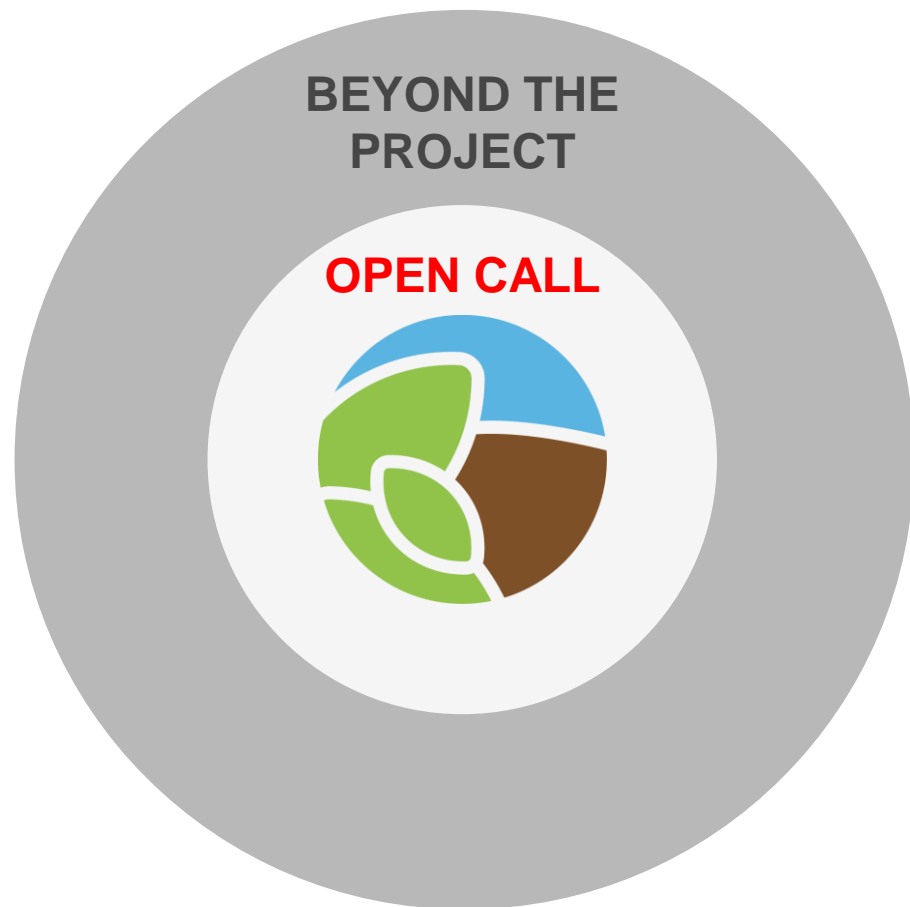

**€35 MILLION
BUDGET**
(€30 million co-funded
under EU H2020
programme)

VISION & AMBITION

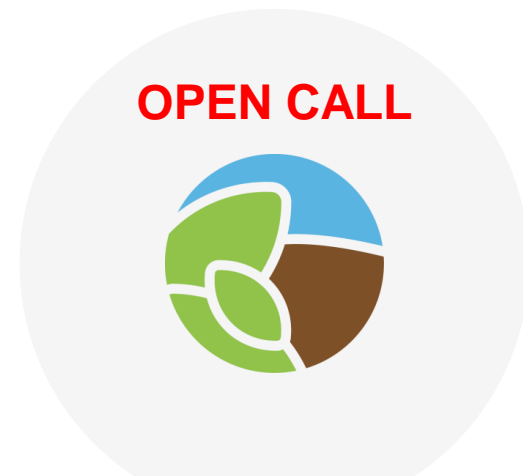

IoF2020 paves the way for:

- Sustainable, flexible and adaptable farming;
- A data-driven farming;
- Autonomous farm operations;
- Integrated and transparent agri-food chain;
- Virtual food chains;
- Interoperable farm activities;
- A personalized nutrition of the European citizens.

OPEN CALL

- Launch on June 5th 2018 at IoT Week in Bilbao, Budget €6 million
- Objective: Increase scale & impact of IoF2020 initiative with new use case teams and diverse stakeholders
- Major challenges:
 - IoT use cases in new regions (Eastern and Northern Europe)
 - Post-farm use cases and other sectors (e.g. logistics, processing, retail, end consumer)
- Proposals with multi-actor approach, high impact on supply chain, technical feasibility & innovation, strong economic sustainability
- Pre-registering phase **just opened**: iof2020.eu/opencall

17 PARTNERSHIPS
FOR THE GOALS

THE GLOBAL GOALS
For Sustainable Development

THE BIGGER PICTURE AND FIRST RESULTS

Integrating the IoT and agri-food sectors for a competitive and sustainable agriculture that addresses SDGs:

“The future of farming is now.”

Promotes food security and improved nutrition with the help of sustainable agriculture.

IoF2020 will directly optimize farming practices:

- **More food with less inputs** by **increasing agricultural productivity** and **reduction of food waste**.
- Improving **feed efficiency** for breeding animals and **reduction of animal mortality**
- Optimized plant density and crop **yields increase**
- Fruits & vegetables **shelf life; traceability and quality increase**
- **Quality and safety** of dairy products increase

Aims at increasing resource and energy efficiency, sustainable infrastructure and better quality of life.

- Use of DSS to reinforce the **decrease of antibiotics** use and to **reduce soil herbicide** use
- **Site specific best protein/ha** (Soil scanning + site specific irrigation, fertilization and weeding)
- Sensing of soil condition to use less **water and nutrients**
- Farmer **work time reduction** and decrease of **inspection costs**
- **Improve certification** schemes

Addresses the hazardous effects of the climate change by strengthening resilience and adaptive capacity, improving education and raising awareness.

IoF2020 will directly reduce the footprint of agricultural activities through the optimization of farming practices:

- **Preservation of the fertility of the soil** and less environmental impact of the entire agricultural sector
- Monitoring tools and support to **improve land use, reduce GHG emission** and **reduce waste**
- **Increasing the yield per ha**

Promotes sustainable forest management, combats desertification, halts loss of biodiversity and reverses the land degradation.

- **IoF2020** helps maintaining **farms with diversity** as it allows to act differently on specific sites within the farm
- Soil sensor monitoring tool to **reduce nutrients use, inspection time,** and **optimize energy and water use**
